antigen presenting molecules with one or more accessory molecules. The matrices are used to activate naive CD4+ T cells and to shift the ongoing activation state into a preferred differentiated population of Th1 or Th2 cells. Applications include the treatment of autoimmune disease, e.g. diabetes, multiple sclerosis, autoimmune thyroiditis, systemic lupus erythematosus, myssthenia gravis, Crohn's disease and inflammatory bowel disease, or an allergy, e.g. asthma and contact sensitivity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120

                                                                                                                                                                                                                                                                   This sequence represents a hybrid IA beta chain gene. This sequence contains a fragment of the IE alpha chain (residues 56-73), as well as a linker and cleavage site. This sequence was transfected into a B cell line (M12.C3) using plasmid planal LAb-Ea. It was found that the encoded sequence was expressed in these cells. Complexes such as this may be used to regulate an immune response. The complexes such as this may be used recognised by a TCR alone or in combination with additional MHC proteins. These complexes are useful for therapeutic purposes and experimental purposes. They can also be used as reagents for the treatment of diseases immunoproliferation diseases, immunodeficiency diseases,

                                                                                                                                                                                                                                                                                                                                                                                                                      AAT17588 encodes a murine MHC fusion complex capable of modulating T cell activity encoded by the vector SCE1. The MHC fusion complex comprises at least one MHC molecule containing a peptide-binding groove and a presenting peptide covalently linked to the MHC molecule and opt. a presenting peptide covalently linked to the MHC molecule and opt. a transformed real to express the complex. The transformed cells may then the used to identify peptides that modulate, pref. antagonise, T cell cativity. DNA encoding a MHC fusion complex or a single chain fusion molecule may be used to vaccinate a mammal against a targeted disorder. The fusion complexes may be used to suppress an immune response in an animal suffering from an immune disorder e.g. multiple sclerosis, insulindependent diabetes mallitus, rheumatoid arthritis, mysathenia gravis or chronic allergies. The complexes may also be used in the treatment of livestock and pets such as cats and dogs. The MHC fusion complexes can be produced such that they contain a single antigenic peptide including one of known structure, additionally a wide range of peptides can be presented for T cell interaction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        100

The invention relates to a major histocompatibility complex (WHC) fusion complex (I) comprising an MHC molecule that contains a peptide-binding groove, and a presenting peptide covalently (e.g. an antigenic peptide) linked to the MHC molecule, where (I) is capable of modulating the complex, where the MHC molecule is a class II MHC (e.g. mouse I-Ad or I-As or human HLA-DR1 (human leukocyte antigen-DR1), a multivalent MHC fusion complex comprising two or more linked complexes, identifying a peptide that can modulate the activity of T cells (involving introducing into host cells cloning vectors that each contain the fusion complex DNA, culturing the host cells under conditions suitable for expression of the MHC fusion complex, and selecting host cells that express MHC fusion complex, and selecting host cells that expression of the C expression vector comprising DNA that codes for the alpha and beta chains of the MHC fusion complex. The DNA constructs can contain beta chains of the fusion complex. Also included are inducing an immune response in a mammal (including vectorating a mammal against a targeted disorder, by administering DNA sequence comprising a fusion complex, or DNA sequence comprising a single chain fusion molecule) and suppressing an immune response in a mammal (including vectoriating a mammal against a targeted disorder, by administering DNA sequence comprising a single chain fusion molecule) and suppressing an immune response in a mammal a DNA sequence comprising a transmembrane domain, and a contain a contain molecule) and suppressing an immune response in a mammal a DNA sequence comprising a transmembrane domain, and a contain a contain and suppressing an immune response in a mammal and suppressing an immune response in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             presenting peptide that is a T cell receptor (TCR) antagonist or partial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel major histocompatibility complex fusion complex having presenting peptide covalently linked to MHC molecule containing peptide-binding groove, used for suppressing immune response in multiple sclerosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   MHC; major histocompatibility complex; gene therapy; fusion complex; peptide-binding groove; T cell modulation; olass II MHC; waccine; autoimmune disorder; multiple solerosis; rheumatoid arthritis; insulin-dependent diabetes mellitus; myasthenia gravis; immunogen;

agonist and is covalently linked to the MHC protein, or DNA sequence coding for the fusion complex which is a single chain fusion molecule. The methods are useful for identifying a peptide that can modulate the activity of T cells, inducing an immune response in a mammal (including vaccinating a mammal against a targeted disorder) and for suppressing an immune response in a mammal. The disorders include an autoimmune disorder such as multiple sclerosis, insulin-dependent diabetes mellitus, rhastbring, myastbrenia gravis or chronic allergies. The present sequence encodes a mouse MHC class II I-Ad fusion complex of the

The MHC fusion complex comprises at least one MHC molecule containing a peptide-binding groove and a presenting peptide covalently linked to the MHC molecule and opt. a transmembrane domain. DNA encoding a MHC fusion complex may be cloned into a host cell to express the complex. The transformed cells may then be used to identify peptides that modulate, pref. antegonise, T cell cetivity. DNA encoding a MHC fusion complex or a single chain fusion molecule may be used to vaccinate a mammal against a targeted disorder. The fusion complexes an immune response in an inmal suffering from an immune disorder e.g. multiple sclerosis, insulindependent diabetes mellitus, rheumatoid arthritis, mysathenia gravis or chronic allergies. The complexes and dogs. The MHC fusion complexes can be produced such that they contain a single antigenic peptide including one of known structure, additionally a wide range of peptides can be presented for T cell interaction.

The invention relates to a major histocompatibility complex (MHC) fusion complex (I) comprising an MHC molecule that contains a peptide-binding groove, and a presenting peptide covalently (e.g. an antigenic peptide) complex (I) comprising an MHC molecule where (I) is capable of modulating the cativity of a T cell. Albo included are a DNA construct coding for the complex, where the MHC molecule is a class II MHC (e.g. mouse I-Ad or I-As or I-A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel major histocompatibility complex fusion complex having presenting peptide covalently linked to MHC molecule containing peptide-binding groove, used for suppressing immune response in multiple sclerosis,
MHC; major histocompatibility complex; gene therapy; fusion comple. peptide-binding groove; T cell modulation; class II MHC; vaccine; autoimmune disorder; multiple sclerosis; rheumatoid arthritis; insulin-dependent diabetes mellitus; myasthenia gravis; immunogen; chronic allergy; mouse; ds; I-Ad; gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                    Edwards AC;

activity encodes a murine MHC fusion complex capable of modulating T cell
activity encoded by the vector SCT1. The MHC fusion complex comprises at
least one MHC molecule containing a peptide-binding groove and a
c presenting peptide covalently linked to the MHC molecule and opt. a
c transmembrane domain. DNA encoding a MHC fusion complex may be cloned
into a host cell to express the complex. The transformed cells may then
be used to identify peptides that modulate, pref. antegonies, T cell
activity. DNA encoding a MHC fusion complex or a single chain fusion
molecule may be used to vaccinate a mammal against a targeted disorder.
The fusion complexes may be used to suppress an immune response in an
c animal suffering from an immune disorder e.g. multiple sclerosis, insulin
dependent diabetes mellitus, rheumacoid arthritis, myasthenia gravis or
chronic allergies. The complexes may also be used in the treatment of
livestock and pets such as casts and dogs. The MHC fusion complexes can be
produced such that they contain a single range of peptides can be
coppendented for T cell interaction
copperated and pet such as casts and dogs. The MHC fusion complexes can be
copperated for T cell interaction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    164
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          GlyThrGlnArgileArgLeuValThrArgTyrileTyrAsnArgGluGluTyrValArg 100

The invention relates to new single chain major histocompatibility complex (sc-MHC) class II complexes that comprise a peptide binding groove, and a modified class II beta 2 chain or covalantly linked cimmunoglobulin (Ig) light chain constant (CI) region. The MHC complexes are useful for detection and analysis of peptide ligands, pathogenic T-cells, for functional, cellular and molecular assays. They can be used to identify and isolate T cell receptor and/or MHC agonists and antagonists. They can be used in vivo to compete with pathogenic antigen presenting cells involved in immune-related disorders. They can also be used to raise antibodies and to screen immune cells. It is also use in a method of suppressing an immune response in mammals. The sc-MHC complexes comprising modified class II beta 2 chains and/or Ig-CI regions are soluble and provide enhanced yield. These MHC complexes also can contain single antigent quantities. The polyspecific MHC complexes also provide a means to detect cells expressing multiple target structures with a single complex. The present sequence represents a DNA encoding a single chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               100
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      284
